

# QUADRA-FIRE<sup>®</sup>

NOTHING BURNS LIKE A QUAD

## Australia's most efficient wood heaters

There are currently over 350 slow combustion wood heaters on the Australian market.

Out of these units Quadra-Fire out performs all of them for efficiency.

10% better efficiency equals 1 ton less of firewood per year.

<b>21 Millennium</b>	-	<b>Avg Efficiency 81% (Australia's Most Efficient)</b>
<b>43 Millennium</b>	-	<b>Avg Efficiency 79% (2nd most Efficient)</b>
<b>31 Millennium</b>	-	<b>Avg Efficiency 71% (7th most Efficient)</b>
<b>3100 Step Top</b>	-	<b>Avg Efficiency 71% (7th most Efficient)</b>
<b>5700 Step Top</b>	-	<b>Avg Efficiency 67% (11th most Efficient)</b>
<b>Voyager Grand Insert</b>	-	<b>Avg Efficiency 63% (6th most Efficient insert)</b>

**Average efficiency of a wood heater on the Australian market - 55%**

**Efficiency and Particulate matter are the two most important factors in buying a fireplace, when looking to buy, ask for these figures.**

The larger the firebox and capacity, the lower the efficiency. With heating capacities up to and beyond 37 house squares, Quadra-Fire are the most efficient, bar none.

All our units are tested by HRL laboratories and ViPAC in Victoria on Australian Hardwood. The 21 and 43 Millennium are also approved for Softwood and have one of the cleanest burns on the market with 0.4 of a gram of carbon per kilogram of wood burnt.

- Longest Burn Time at 19 hours on the 5700 Step Top unit (most units are above 10 hours)
- Most extensive warranty including the baffle and air tubes
- One of the cleanest burning at 0.4 of a gram per 1 KG of wood
- Exclusive patents including the Quad Burn System and Automatic Combustion Control
- Fully tested to Australian Conditions

**AUTOMATIC  
COMBUSTION  
CONTROL**

**QUAD  
BURN 4X**
