

QUADRA-FIRE®

NOTHING BURNS LIKE A QUAD

What does efficiency mean?

The average Southern Australian household will burn between 4-6 tons of wood per heating season.

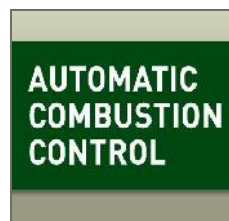

The average Australian slow combustion unit has an efficiency rating of 55%. Quadra-Fires average rating is 79%.

This equates to around 2—2 1/2 tons of wood being saved per year by purchasing a Quadra Fire.

With the average price of wood in most metropolitan areas around \$270 per ton, this can mean a saving of between \$540 and \$670 per year.

Add to that a warranty that is industry leading warranty of beyond 10 years and features such as our patented Automatic Combustion Control and Quad Burn Technology makes Quadra Fire the smartest choice for your wood burning fireplace.
